

Presents:

Creative Pathways Symposium 2012

The focus of this year's symposium is how the brain changes with positive creative experiences. Dr Daniel Lane a WA expert on neuroplasticity is this year's keynote speaker. He will be sharing his knowledge on how creative approaches facilitate a healthy brain and enriched quality of life.

Other presentations will focus on inspiring practical examples of how creativity and the arts can be introduced into the world of people living with dementia.

There will also be time for all attendees to participate and interact using an innovative Open Space style discussion. The Open Space technique is a proven approach that gives everyone the opportunity to share their stories, ideas and concerns and to learn from each other. This unique process gives creative space for people to connect with each other on issues and aspirations they are passionate about.

Dr. Daniel Lane, BSc DC (UK) DACNB (USA) FFAAFN
